SYSTEM DOMAIN: LUMENFI.COM

Lumen LiFi — Explicit UX & Page Component Specifications

A complete system architecture blueprint mapped to direct page specifications. This blueprint establishes modern navigation parameters, optimizes core structures, and routes user intent cleanly.

SYSTEM REFINEMENT STRATEGY

ARCHITECTURE SHIFT

Flattened Architecture Model

We eliminate recursive browsing paths and duplicate content. Entire categories, directories, and hardware options are centralized on unified layers.

PRIMARY FIX:

No repetitive "View All" page re-routing. Single interfaces house multi-tiered parameters through contextual modules.

Proof & Protocol Integration

We establish credibility at every touchpoint. IEEE 802.11bb standardization and structural telemetry feeds are built directly into discovery streams.

TECHNICAL PROOF:

Live-updating comparison graphs and certified standard parameters replace static marketing descriptions.

PAGE 1: IMMERSIVE HOMEPAGE SPECS

INITIAL DISCOVERY STREAM

1. Hero Light Stream

Animated canvas depicting data transition via light pulses.

HEADLINE COPY:

"Wireless Data Transmission, Driven By Light."

2. Segmented Router

A clean navigational grid segmenting users into 3 priority vertical channels.

FUNNELS:

Defense Sector, Commercial Workspaces, Device OEMs.

3. Interaction Engine

Visual interactive pathway explaining mechanical data routing.

FLOW MATRIX:

Source Intake ➔ Modulator ➔ Capture ➔ Terminal.

SEGMENTED PATH SPECIFICATIONS

- **Defense Sector Funnel:** Routes directly to zero-emission infrastructure. Emphasizes absolute wireless security, strict physical containment parameters, and complete protection from electromagnetic signals.
- **Commercial Workspace Funnel:** Delivers technical configurations optimized for high-density workspaces. Focuses on capacity scaling, interference elimination, and seamless light integration.
- **Device OEM Integration:** Tailored pathway for product manufacturers. Provides rapid, technical documentation access on physical modules, form factors, and standard developer reference configurations.

PAGE 2: CONSOLIDATED HARDWARE SPECS

MASTER SOLUTIONS MATRIX

0

LINK LOOPS

Flattened Layout Integration

We completely eliminate the separate "View All Solutions" transition page. All product variations, usage features, configurations, and target workspaces are now integrated into a single high-density layout.

STRUCTURAL UI FIX:

Product modules utilize a dynamic multi-tab interface directly inside their grid panels, allowing detailed navigation without forcing page re-routing.

MASTER COMPONENT GRID SCHEMA

DYNAMIC CORE MATRIX

INTERFACE TIER	USER CONFIGURATION DETAILS	SUB-TAB CONTENT MATRIX	VISUAL COMPONENTS
Tab 1: Features	Performance Metrics	Displays real-time light data transmission speeds, optical range thresholds, and security parameters.	Dynamic Icon Grid
Tab 2: Config	Hardware Specifications	Physical dimensions, network connectivity interfaces, transceiver parameters, and electrical power consumption.	Dimension Blueprint
Tab 3: Environment	Target Scenarios	Outlines target environments like aerospace cockpits, medical clinics, defense command centers, and subsea structures.	High-Contrast Badges

UNIFIED TELEMETRY ARCHITECTURE

PROOF & SIGNAL ENGINE

Side-by-Side Video Modules

Embedded directly below technical modules to demonstrate product performance under diverse ambient environments.

TECHNICAL DISPLAY CONTENT:

Comparative performance feeds showing uninterrupted data throughput under bright ceiling lights, workspace sunlight, and shadow interference.

Embedded Device Telemetry

A live web-based dashboard simulating transceiver connection parameters on target machines.

USER INTERACTIONS:

Users adjust variables (e.g., lux levels, physical distance) to view simulated packet loss, latency stats, and connection stability indices.

PAGE 3: REFERENCE & RESOURCE SPECS

VERIFICATION CORE

1. Searchable Index

Unified interface collecting scattered technical questions.

DESIGN FIX:

Consolidates scattered FAQs into a single master index on the resource page.

2. Expanded Case Study Hub

Inline card expansion displaying comprehensive validation studies.

TECHNICAL LOGIC:

Clicking "Show More" opens deep-dives inline, maintaining active scroll position.

3. Asset Library

Streamlined downloads targeted at network architects and integrators.

ASSET DELIVERABLES:

Technical specifications sheets, 3D module blueprints, and API development kits.

FAQ DE-DUPLICATION PROTOCOL

GLOBAL ASSET MAPPING

QUESTION CATEGORY	PREVIOUS SCATTERED LOCATIONS	CONSOLIDATED GLOBAL TARGET	METADATA TAGS
Physical Transmission	Solutions Sub-pages, Hardware Footer	FAQ Index ➔ Physical Layer Specs	Speed, Distance, Transceiver
Safety Parameters	Workspace Page, Aerospace Page	FAQ Index ➔ Optical Safety Standards	IEEE 802.11bb, Eye Safety
Interference Spectrum	Defense Layout, Device OEM Module	FAQ Index ➔ RF Protection Matrix	EMC/EMI Shielding, Jamming

PAGE 4: INTERACTIVE JOURNEY SLIDER

PROGRESSION MILESTONES

Q1 - Phase I

Foundational optics lab discovery. Standardized signal physical constraints validation.

Q2 - Phase II

Launch of initial transceivers. Delivery of physical network developer tools.

Q3 - Phase III

Securing aerospace patents. Global industrial standards compliance verification.

Q4 - Phase IV

Commercial workspace rollout. Launching modern careers interface specs.

TALENT-FOCUSED CAREERS INTERFACE

RECRUITMENT SPECIFICATION

- **Purpose-Driven Vision:** Features clear, inspiring headlines focused on scaling the next-generation optical data network. Directly links technical work to standard evolution.
- **Culture & Values:** Highlights engineering excellence, operational agility, and multidisciplinary design teams working at the intersection of optoelectronics and networking protocols.
- **Dynamic Roles Architecture:** Filterable job layout that categorizes openings by department, location, and seniority. Includes a streamlined, minimal application process to increase applicant conversion.

ARCHITECTURE SIGN-OFF PROTOCOL

ECOSYSTEM VERIFICATION

SYSTEM STAKEHOLDER	RESPONSIBILITY MATRIX	VERIFICATION CRITERIA
Content Team	Page specifications, telemetry specs, FAQs	Completeness of variables across all 4 system core pages.
UI/UX Design Team	Component matrices, timeline, dynamic tabs	Mobile-first viewport consistency, zero link-loop paths.
Tech & Dev Team	Form endpoints, dynamic tabs, video embeds	API payload validation, asset server transmission latency.
